LA PAROLA ALL'ESPERTO

«A 30 anni la pelle inizia a impoverirsi di acido ialuronico, fibre elastiche e collagene che costituiscono la sua impalcatura, ed ecco le prime rughe sul contorno occhi e ai lati della bocca. Poi il colorito si spegne e appaiono le prime macchiette scure», spiega Mazzarella. «Per riattivare il naturale turn over cellulare basta fare un peeling due volte la settimana. Nei casi più difficili, si può ricorrere a un trattamento antiage più strong: per esempio, con la luce del laser».
